Is the data in your company secure?

Check and see that security feet of Android, iOS and Windows devices. It does not have to be complicated.

As the experts in mobile devices security, we recommend to treat company smartphones and tablets with the same attention as company computers. Most often, devices contain confidential and sensitive information (e-mails, contacts, etc.).

Together with the best cyber security engineers, we have created Proget system to secure companies data.

Key features of Proget solution

Control device features
When a company's device becomes subject to security policies in accordance with the company's requirements. Through the system, it is possible to control all functions of the device.

Geolocation
The location of the devices is available in several modes: forcing, interval, in motion, along with additional configuration options, including time frames.

Data encryption
We encrypt data with the use of cryptographic algorithms with the highest standard and thanks to the security updates the system is resistant to any vulnerabilities.

Remote wipe
Allows to clear the entire memory of the device or just the company data, which ensures the protection of sensitive data against third parties.

Control applications
Control of the applications that can be downloaded to the device. Ability to distributing, create white and black application lists and the company store.

Corporate standard
We integrate business services, such as e-mail, calendar, browser, but we also provide extended functionalities, such as file sharing, file access, VPN, intranet and many other tools.

Remote desktop
Allows to get remote access to mobile devices, which greatly improves problem-solving by the IT Department.

Expansion and adjustments
Proget is not just a complete platform, it is a framework which we use for customization. We can provide you with software tailored to your needs, so that each detail suits your vision.

Integration

If integration with unusual system or service is required (SIEM, DLP, ERP, CRM and others), the R&D department will determine if the implementation is technically available, what is a real implementation time. Administrator`s console modifications, new functionalities, information, reports and platform matching are also performed for needs and expectations of the company.
